Don't let yourself be lured

Debit and credit cards are very secure means of payment that are used a great deal. This also attracts fraudsters. Card fraud often begins with phishing.

Think of LINDA

Fisherwoman LINDA reminds card users of the most important rules of behaviour when handling debit and credit cards. Each letter of LINDA's name stands for a mnemonic that can be used to prevent phishing. If you consistently adhere to all five principles, you can effectively protect yourself against card fraud.

What is phishing?

Phishing is a widespread scam that comes in many different forms. Criminals trick their victims into disclosing their personal data such as PIN codes, SMS codes, CVC/CVV numbers or passwords. For example they use fake websites or QR codes, links in emails, phone calls or text messages (SMS, WhatsApp, Messenger, etc.).
